(54) Title: NEW PRODUCTS SPECIFIC TO PATHOGENIC STRAINS AND THEIR USE AS VACCINES AND IN IMMUNOTHERAPY

(57) Abstract: The invention relates to isolated antigenic polypeptides obtainable by a process comprising the steps of: 1- selecting on the basis of sequence analysis those of the polypeptides which are either located in the outer membrane or secreted by the bacteria, 2- identifying the genes coding for said polypeptides which are conserved in B2/D clinical isolates, 3- purifying the polypeptides identified in step 1, which are found in step 2 to be conserved in B2/D isolates, 4- testing the polypeptides for immunogenicity using animals models. Application for making vaccines compositions and immunotherapies

New products specific to pathogenic strains and their use as  
vaccines and in immunotherapy

5 The invention relates to new products specific to pathogenic strains, particularly to extra-intestinal *E. coli* strains.

10 It more particularly relates as products to antigenic polypeptides and antibodies directed against said polypeptides and to their use as vaccines and in immunotherapy, respectively.

15 Although *Escherichia coli* is probably the best known bacterial species and is one of the most common isolated in clinical microbiology laboratories, misconceptions abound regarding the various types of *E. coli* and the infections they cause.

*E. coli* strains of biological significance to humans can be broadly classified in 3 major groups:

1. Commensal strains, which are part of the normal flora.
- 20 2. Intestinal pathogenic strains, which are not part of the normal flora. This group contains various pathotypes (EPEC, EHEC, ETEC, EIEC) not including *Shigella*.
3. Extra-intestinal strains (ExPEC) which are responsible for infections outside the gastro-intestinal (GI) tract, but  
25 can also be part of the normal flora. All hosts, either immunocompromised or not are susceptible to these infections.

30 ExPEC strains are responsible for the majority of the urinary tract infections (UTI) particularly cystitis, pyelonephritis, and catheter associated infections.

They are also responsible for abdominal infections, nosocomial pneumoniae, neonatal meningitis, soft tissue infections, and bone infections. Each one of these localizations can lead to

bacteremia with a risk of sepsis in case of organ failure. ExPEC strains are indeed the most common Gram negative bacilli isolated from blood cultures.

5 750 000 cases of bacterial sepsis occur each year in the US, and are responsible for 225 000 deaths. In a recent study on 1690 cases of sepsis, it was shown that the main bacteria species identified is ExPEC (16% of the cases) and then *S.aureus* (14% of the cases).

10.

These numbers demonstrate the importance of ExPEC strains in both hospital and community acquired infections.

ExPEC strains correspond to a homogenous subset of *E. coli* strains. Analysis of phylogenetic relationships among *E. coli* strains by MLEE has revealed that *E. coli* belong to 4 main phylogenetic groups designated A, B1, B2 and D.

The pathogenesis of ExPEC strains is that of extra-cellular microorganisms, i.e., they are well adapted to growth in the extra-cellular fluids and efficiently resist phagocytosis by polymorphonuclear. Initial studies have shown that virulence factors known to be important for the extra-cellular growth are mainly found in B2/D *E. coli*., thus suggesting that B2/D subgroups contain most of the ExPEC strains. This was reinforced by experiments performed on animals showing that B2/D strains are more virulent than A and B1 strains. Subsequent epidemiological studies have indeed confirmed these hypotheses. B2/D isolates are those predominantly responsible for neonatal meningitidis (87%) and community or nosocomial acquired urosepsis, (93 % and 85%, respectively).

Similar results have been reported for cystitis (70% are due to the sole B2 *E. coli*), thus demonstrating that the importance of ExPEC strains.

- 5 These recent findings demonstrate that the B2/D subgroup of strains is the *E. coli* core genome the best adapted to growth in extra-cellular fluids.

10 In addition to this core genome, ExPEC strains have various pathogenicity islands which encode virulence factors associated with the different pathogenesis of extra-intestinal *E. coli* infections (UTI, urosepsis, neonatal meningitidis...). Among the main virulence factors are the capsule, which is well-known to be important for extra-cellular growth, and the  
15 iron chelation systems (aerobactin and enterochelin, for example). In addition, depending on the pathogenesis, these strains can produce toxins (CNF, hemolysin...), adhesins (pap, sfa...) and other iron chelation systems.

- 20 The notion that B2/D *E. coli* correspond to a distinct subset of pathogenic *E. coli* strains is reinforced by the fact that B2/D *E. coli* are not broadly isolated from the stools of humans. They were recovered from only 11% of individuals, whereas A and B1 subgroups are present in the stools of 74% of  
25 the individuals of a human population.

As mentioned above the pathogenesis of ExPEC strains relies on their ability to multiply in the extra-cellular fluids and to resist bactericidal activity of the complement and  
30 phagocytosis by polymorphonuclear. Therefore, as for other extra-cellular pathogens (*Haemophilus influenzae*, *Streptococcus pneumoniae* and *Neisseria meningitidis*) a protective antigen against ExPEC has to induce antibodies

that promote opsonisation and/or the bactericidal activity of serum.

- Considering the above statements, an efficient antigen has to be largely represented among the population of B2/D *E. coli*. Similarly to other extra-cellular pathogens, the capsular polysaccharide would be an ideal antigen, however most pathogenic B2 strains express the K1 polysaccharide. The latter has a structure identical to that of group B meningococcus, which is non-immunogenic and shares common antigens with the brain. Another possible target may be the lipopolysaccharide (LPS). However there are a large number of different LPS serotypes that are shared by various subgroups.
- The inventors have now found that some specific components coded by the B2/D genome, but absent from A and B1 *E. coli* strains, are particularly useful as antigens and can specifically prevent the pathologies due to ExPEC strains. Homologs of these antigenic components can be found in other pathogenic bacterial species and therefore are useful to prevent the pathologies caused by these bacteria. Accordingly, any reference to products specific to ExPEC strains and to their uses will encompass components in these species.
- For example homologous antigens could be present in the following species and be as such used for prevention of disease due to the bacteria:

*Pseudomonas aeruginosa*, *Escherichia coli* O157:H7, *Yersinia pestis*, *Vibrio cholerae*, *Legionella pneumophila*, *Salmonella enterica*, *Salmonella typhimurium*, *Haemophilus influenzae*, *Neisseria meningitidis*, *Neisseria gonorrhoeae*, *Bacillus anthracis*, *Burkholderia cepacia*, *Campylobacter jejuni*, *Chlamydia pneumoniae*, *Chlamydia trachomatis*,

*Clostridium botulinum*, *Clostridium difficile*, *Cryptococcus neoformans*, *Enterobacter cloacae*, *Enterococcus faecalis*, *Helicobacter pylori*, *Klebsiella pneumoniae*, *Mycobacterium leprae*, *Mycobacterium tuberculosis*, *Pseudomonas aeruginosa*,  
5 *Salmonella paratyphi*, *Salmonella typhi*, *Staphylococcus aureus*,  
*Klebsiella pneumoniae*, *Listeria monocytogenes*, *Moxarella catarrhalis*, *Shigella dysenteriae*, *Shigella flexneri*, *Shigella sonnei*, *Staphylococcus epidermidis*, *Streptococcus pneumoniae*,  
and any species falling within the genera of any of the above  
10 species.

It is then an object of the invention to provide new isolated antigenic polypeptides, and polynucleotides belonging to the core B2/D genome and not present in commensal *E. coli*.  
15

Another object of the invention is to provide antibodies raised against such antigenic polypeptides, or peptidic fragments.

20 It is still another object of the invention to provide vectors and host cells containing said polynucleotides.

Another object of the invention is to provide vaccine compositions specific to extra intestinal infections caused by  
25 ExPEC and pathologies caused by other pathogenic strains expressing antigenic polypeptides homologous to the ExPEC antigenic polypeptides.

The invention also relates to means for detecting and treating  
30 a development of *E. coli* in a human or animal compartment which is extra-intestinal (systemic and non-diarrhoeal infections, such as septicaemia, pyelonephritis, or meningitis in the newborn).

The isolated antigenic polypeptides used according to the invention are selected among polypeptides specific to B2/D *E. coli* strains and not present in A and B1 isolates of *E. coli*. They are encoded by genes belonging to the core B2/D genome and are not present in commensal *E. coli*.

They have a sequence selected in the group comprising the sequences of SEQ ID N°11 to N°66 or 133-145 or homologous sequences with a minimum of 25% of identity with the whole sequences SEQ ID N°11 to N°66, or 133-145, respectively.

The isolated polypeptides having SEQ ID N° 14, 15, 17, 21, 22, 23, 28, 29, 30, 32, 36, 38, 39, 41-44, 46, 49, 50, 52 to 55, 58, 60, 63, 133-138 are new polypeptides and therefore are part of the invention.

The invention also relates to homologous isolated antigenic peptides, comprising polypeptides having at least 25% identity to a polypeptide having a sequence SEQ ID N° as above defined, more particularly having SEQ ID N°14, 15, 17, 21, 22, 23, 28, 29, 30, 32, 36, 38, 39, 41-44, 46, 49, 50, 52 to 55, 58, 60, 63, 133-138, or at least 25% identity to a fragment comprising at least 5, at least 10, at least 20, at least 30, at least 40, at least 50, at least 60 or more than 60 consecutive amino acids of a polypeptide having a sequence corresponding to said SEQ ID N°s, as determined using BLASTP or BLASTX with the default parameters.

Said polypeptides are obtainable by a process comprising the steps of :

- a- selecting on the basis of sequence analysis those of the polypeptides which are either located in the outer membrane or secreted by the bacteria,

- b- identifying the genes coding for said polypeptides which are conserved in B2/D clinical isolates,
- c- purifying the polypeptides identified in step a, which are found in step 2 to be conserved in the B2/D isolates,
- 5 d- testing the polypeptides for immunogenicity using animals models.

By the term "conserved", it is meant, according to the invention, that the genes coding for the polypeptides are  
10 present with a frequency of at least 50% in B2/D isolates, preferably greater than 60%, more preferably greater than 80% and even more preferably greater than 85%, and in less than 40% in A/B isolates; preferably in less than 20%, more preferably in less than 15%.

15

The animal models used in step c are infected adult animals, eventually immunodepressed.

The adult animals particularly mice, are infected  
20 intraperitoneally, the endpoint being the animal death and/or bacteremia measurement.

The animals can be immunodepressed by injection, for example, of cyclophosphamide which induces a neutropenia. Such a model  
25 will validate the use of the antigen for prevention of *E. coli* sepsis in immunodepressed patients. Another animal model could be for example 2 to 3 day old infant mice.

The variants or fractionnal sequences conserving the B2/D  
30 properties and which are antigenic as defined in step 4 of the above process are also part of the invention. The term "variant" is herein intended to mean any sequence having insertions and/or deletions and/or substitutions with respect

to the parent sequence. The term "fractional" is herein intended to mean any fragment of the parent sequence.

The invention also relates to the use of isolated polynucleotides coding for a polypeptide such as above defined according to the universal genetic code and taking into account the degeneracy of this code. The term "polynucleotide" encompasses any nucleotidic sequence such as DNA, including cDNA, RNA, including mRNA.

Said polynucleotides have preferably sequences corresponding to SEQ ID N°77 to SEQ ID N°132 or 146 to 158 .

More preferably, said polynucleotides have sequences corresponding to SEQ ID N° 80, 81, 83, 87, 88, 89, 94, 95, 96, 98, 102, 104, 105, 107-110, 112, 115, 116, 118, 119, 126, 127, 130, 132, 135, 146-151.

The invention also relates to the homologs to said polynucleotides . Said homologs may have at least 25% identity to a polynucleotide having said sequences, or at least 25% identity to a fragment comprising at least 15, at least 30, at least 60, at least 90, at least 120, at least 150, at least 180 or more than 180 consecutive nucleotide of a polynucleotide having one of said SEQ ID N°s, as determined using BLASTN with the default parameters, and are encompassed by the invention inasmuch as they are capable of coding for a polypeptide having the antigenic properties of those according to the invention.

The present application is also aimed towards any vector comprising at least one of said polynucleotides and also any cell transformed by genetic engineering, characterized in that it comprises, by transfection, at least one of said

polynucleotides and/or at least one vector according to the invention, and/or in that said transformation induces the production by this cell of at least one polypeptide corresponding to a polynucleotide such as above-defined.

5

The invention also relates to a process for isolating and identifying antigenic polypeptides, therefore useful as vaccine for *E. coli*.

10 Such a process comprises the steps of

- a- selecting on the basis of sequence analysis those of the polypeptides which are either located in the outer membrane or secreted by the bacteria,
- 15 b- identifying the genes coding for said polypeptides which are conserved in B2/D clinical isolates,
- c- purifying the polypeptides identified in step a, which are found in step 2 to be conserved in B2/D isolates,
- d- testing the polypeptides for immunogenicity using animals
- 20 models.

The selected antigenic polypeptides, alone or in combination, are capable of inducing an antibody response for prevention of infections due to ExPEC strains regardless of the pathogenesis and of the infection site (UTI, pyelonephritis, sepsis, bacteremia, neonatal meningitis).

Such polypeptides particularly have sequences SEQ ID N°1 to SEQ ID N°66, or 133-145 or correspond to homologous sequences.

30

The invention thus relates to vaccine compositions specific to *E. coli* extra-intestinal infections, comprising an effective amount of at least one antigenic polypeptide or fragment thereof as above defined, with a carrier, particularly at

least one polypeptide of SEQ ID N°1 to SEQ ID N°66, except SEQ ID N°8, and 133-145 and the homologous polypeptides.

Such vaccine compositions are particularly useful for preventing urinary system infections, pyelonephritis, sepsis, bacteremia, neonatal meningitis.

The vaccine compositions of the invention are indicated for :

- immunodepressed patients, ideally before the start of the immunosuppressive therapy : patients suffering from cancer, diabetes, leukaemia, transplant patients, patients receiving long-term steroids therapy.
- Patients before surgery where there is a high risk of *E. coli* infections (abdominal surgery).
- In all these cases, the *E. coli* vaccine of the invention could be administered in association with a *Staphylococcus aureus* vaccine,
- Patients with recurrent UTI, especially after one episode of pyelonephritis.
- The prevention of neonatal infections will require vaccination of the mother, implying vaccination long before pregnancy to avoid potential problem. Ideally such a vaccine should be associated with a Group B *Streptococcus* polysaccharide vaccine in order to also prevent late onset neonatal infections. It should be pointed out that the induction of a level of antibodies against B2/D *E. coli* in pregnant women would also prevent UTI, which are always a risk in the context of a pregnancy.

The formulation and the dose of said vaccine compositions can be developed and adjusted by those skilled in the art as a function of the indication targeted, of the method of

administration desired, and of the patient under consideration (age, weight).

5 These compositions comprise one or more physiologically inert vehicles, and in particular any excipient suitable for the formulation and/or for the method of administration desired.

10 For example the vaccine could be a suspension of the purified polypeptide in sterile water with aluminium based mineral salt as adjuvant and be administered subcutaneously with a first and boosting injection.

15 The antibodies raised against the above-identified polypeptides are also part of the invention.

They are capable of binding to said polypeptides in physiological-type conditions (*in vivo* or mimicking *in vivo*) when administered to a human or animal organism, and ELISA-type conditions when said binding product is intended to be  
20 used in assays and methods *in vitro*. Such antibodies advantageously inhibit the extra-intestinal growth of ExPEX strains in human or animal.

25 They are particularly useful for immunotherapy applications with antibodies specific to polypeptidic antigens, for treatment and prevention of severe infections in at risk populations such as neonates or patients undergoing surgical procedures. For these applications specific human monoclonal antibody (Mab) will be derived from the peptides or  
30 polypeptides.

The methods for manufacturing such antibodies using the polypeptides according to the invention are available to those skilled in the art. They are conventional methods which

comprise, in particular, the immunization of animals such as rabbits and the harvesting of the serum produced, followed optionally by the purification of the serum obtained. A technique suitable for the production of monoclonal antibodies is that of Köhler and Milstein (Nature 1975, 256:495-497).

Said antibodies do not recognize the cells of the human or animal to which it is intended.

In particular for immunotherapy applications with monoclonal antibodies specific to polypeptidic antigens, for treatment and prevention of severe infections in at risk populations such as neonates or patients undergoing surgical procedures. For these applications specific human monoclonal antibody will be derived from the peptides or polypeptides.

The antibodies or fragments thereof are advantageously humanized when intended for a human administration.

Alternatively, humanized Mab could be derived from murine or rat Mab specific of the antigen. These fully humanized Mab are constructed using conventional molecular techniques to graft complementarity-determining regions from the parent murine or rat antibacterial antibody into human IgG1 kappa heavy and light-chain frameworks.

The present invention is also aimed towards the use, in an effective amount, of at least one of polypeptides having SEQ ID N°14, 15, 17, 21, 22, 23, 28, 29, 30, 32, 36, 38, 39, 41-44, 46, 49, 50, 52 to 55, 58, 60, 63, 133-138, antibodies or polynucleotides for the diagnosis of the presence or absence of undesirable extra-intestinal *E. coli*, and/or for the diagnosis of an extra-intestinal *E. coli* infection.

The detection of the presence or absence of such compounds can in particular be carried out by nucleotide hybridization, by PCR amplification or by detection of their polypeptide products. Detection of the presence of such compounds makes it possible to conclude that a B2/D *E. coli* strain is present.

The invention also relates to pharmaceutical compositions for alleviating and/or preventing and/or treating an undesirable growth of *E. coli* comprising an effective amount of at least one polypeptide as above defined, particularly having SEQ ID N°1-66 to 133-145, in combination with a pharmaceutically acceptable carrier.

Preferred pharmaceutical compositions comprise at least one polypeptide having SEQ ID N°14, 15, 17, 21, 22, 23, 28, 29, 30, 32, 36, 38, 39, 41-44, 46, 49, 50, 52 to 55, 58, 60, 63, 133-138,

The present application is also aimed towards any use of a polypeptide such as above defined for the manufacture of a composition, in particular of a pharmaceutical composition, intended to alleviate and/or to prevent and/or to treat an undesirable growth of *E. coli*, such as an *E. coli* infection, (for example systemic and non-diarrhoeal infections), the presence of extra-intestinal *E. coli* or a sanitary contamination.

The present invention is illustrated by the examples which follow and which are given in a non limiting capacity and with reference to figures 1 and 2, wherein

- Figure 1 represents a protein purification result after cloning and expression, and

- Figure 2 is a picture of the DNA array after hybridization with the genomic DNA from a B2/D reference strain.

5 **Example 1:** Assay for the immunogenicity of a selected polypeptide from sequences 1-66 and 133-145 (except SEQ ID N°8)

10 . Cloning expression and purification of the selected polypeptide.

The nucleic acid having SEQ ID N°95 encoding the polypeptide corresponding to SEQ ID N°28 was cloned without the signal sequence (coding the 16 first amino acids) in a prokaryotic expression vector according to classical methods for cloning. 15 The recombinant plasmid was used to transform the *E. coli* strain BL21. Transformed cells containing the recombinant plasmid were selected in LB medium with 100µg/ml ampicillin. Individual clones are picked and grown in presence of IPTG 1mM 20 to induce recombinant protein expression. Total protein content of the culture cells was extracted by cell lysis. Recombinant protein was purified by affinity columns.

Protein purification after cloning and expression

25

Total cell lysat of IPTG-induced bacteria were mixed with Ni-NTA matrix (Qiagen®) for 60 min et 4°C and loaded into a column. After washing the column to remove non specific binding, the recombinant protein was eluate 3 times with 1 ml 30 elution buffer pH 5.9. The protein was then eluate 4 times with 1 ml elution buffer pH 4.5.

Figure 1 represents a Coomassie blue stained SDS gel of recombinant protein after affinity column purification: PM:

markers E1-4: sample collected from each purification fraction. Arrow indicate the band corresponding to the recombinant protein.

5 . Test for immunogenicity in an animal model

Polypeptide preparation from SEQ ID N°28 was injected to Swiss mice to induce an antibody response as follows :

10 At d0 a first immunisation was done by injecting 20µg of the protein at in 100µg solution of PBS and complet Freund adjuvant (1:1). Control animals were injected with 100µl solution of PBS and complet Freund adjuvant (1:1).

15 Boosting injection at d21 with 10µg of protein in 100µl PBS and complet Freund adjuvant (1:1).

Sera from vaccinated animals was prepared from blood drawn by puncture in the tail of the mice.

20

Detection of specific antibodies in animal sera, at d20 before the boosting injection, was performed by western blot according to standart protocol. Purified polypeptide was subjected to electrophoresis (10µg per lane) and transfert to  
25 nitrocellulose membrane.

The membranes were then saturated by incubation 35 min with PBS/Tween20 0.1%/powder milk 5%.

30 Diluted sera was incubated with the membrane for 45 min. Membranes were washed three time 5 min with PBS/tween. Bound antibodies were then recognized by an anti-mouse IgG coupled to horseradish peroxidase enzyme. After washing 3 times with PBS/Tween and 3 time with PBS, enzymatic activity was revealed

by addition of chromogenic substrate DAB and hydrogen peroxyde.

5 Results : Sera from vaccinated animal, diluted at 1/100 revealed a unique band corresponding to the injected polypeptide. No antibody to the polypeptide could be detected in sera from control animals.

10 At d42, 300  $\mu$ l of cyclophosphamide and 200 $\mu$ l at d45 were injected IP in the mice to induce neutropenia in order to increase the susceptibility to the challenge infection.

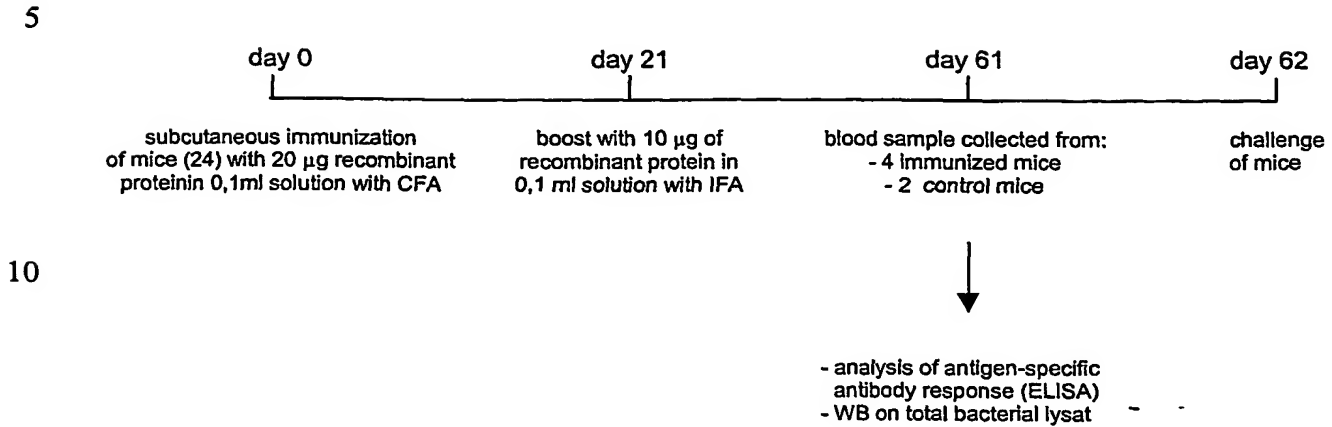

At d46 vaccinated and control mice were challenged by intraperitoneal injection of the wt B2/D strain C5 of *E. coli* at a dose equal to 10 time the LD50 (letal dose).

15 Immunogenicity of the selected polypeptide and protection conferred by vaccination with the seleted polypeptide was assessed by the survival of vaccinated animals three days post challenge.

20 Another example of vaccination to demonstrate immunogenicity of polypeptides:

- 24 Balb/c mice, female, 6 weeks old were immunized by  
25 subcutaneous Injection of the protein in Complete Freund's adjuvant, and 14 control mice were injected with CFA and PBS  
- 3 weeks later a boost injection of 10  $\mu$ g of protein in with incomplete Freund's adjuvant.

## VACCINATION PROTOCOL

15 Before challenge at d62, sera was collected at d61 to analyze the antibody response in the vaccinated animals.

- WB analysis of sera from immunized mice were performed to detect the antibody response to the recombinant protein used for immunization as described above.

- An ELISA assay was set up to measure antibody titer in vaccinated animals:

- Each recombinant protein was coated on a 96-well plates with (200 ng/100 µl coating buffer), plates are saturat with 3%BSA in PBS.
- Twofold serial dilution of sera were made in PBS 1X/1% BSA from 1:500, to 1: 1024000 and incubated on the plate, antibody binding was revealed using a rabbit Anti-mouse IgG conjugated with Peroxydase and OPD(o-phenylenediamine) chromogen substrate.
- Read the OD<sub>495</sub> with Sanofi Diagnostics Pasteur PR2100®

- Results:

- To assess the ability of sera to recognize the native antigen expressed by the bacteria, western blot was also performed on whole bacteria lysat.

10 To this end, bacteria were grown in LB medium supplemented or not with iron chelator until OD600=0.5-0.6 and pelleted by centrifugation 5 minutes at 10000 rpm. The pellet was lysed by resuspension in 1X loading buffer containing SDS and heated 5 min at 95°C before migration on the gel. Western blot assay was

15 then performed with sera from controls and vaccinated animals.

Results in table 2 shows the results obtained with Sera from vaccinated mice against recombinant protein and against *E.coli* lysat.

- 10 • Protection assay, end point: mortality

At d62, 20 vaccinated and 10 control mice were challenged with an *E.coli* virulent strain belonging to B2 group at a dose equal to the LD 50 ( $5.10^5$  cfu/mice) by intraperitoneal  
 15 injection. Mortality is recorded at 48h, results in Table 3 are expressed as a percentage of protection representing the difference of survival in vaccinated versus control mice groups.

20 Table 3 : Protection obtained in mice challenged after immunization with proteines encoded by the corresponding ORFs.

SEQ ID N°	% protection
2	52
26	66
36	46
10	30
47	60
20	25

- 25 • Protection assay, end point: bacteremia

30 At d62, 10 vaccinated and 5 control mice were challenged with an *E.coli* virulent strain belonging to B2 group at a dose equal to the 1/5 of the LD 50 ( $1.10^5$  cfu/mice) by intraperitoneal

injection. With this infectious dose the mice survived the infection at d48. At 48h blood was collected for each mice in presence of heparin. To assess bacteremia, the blood was plated on LB media and colonies count measured after overnight culture.

Example 2: Distribution of the DNA sequence of ORFs specific for B2/D group of *E.coli* in clinical isolates.

10 To make a DNA arrays membrane specific for B2/D group of *E.coli*, DNA corresponding to ORFs that were identified as specific for B2/D core genome of *E.coli* was amplified by PCR and spotted on nylon membrane using standard methods to those skilled in the art.

15 Chromosomal DNA from 30 *E.coli* clinical isolate strains ( of which 23 were from pathological conditions and 6 isolated from human normal flora), was prepared and radiolabelled with <sup>33</sup>P.

20 DNA from these clinical isolates was then hybridized to the B2/D specific DNA array, the results were read by a phosphoimager and spots reactivity was analyzed with an image analysis software. If hybridization gave a positive signal  
25 for a particular ORF, this ORF is considered to be present in the genome of the isolate. Quality control of the array is the hybridization of a probe DNA from a reference strain of *E.coli* as shown in figure 2, which represents a picture of the DNA array after hybridization with the genomic DNA from a B2/D  
30 reference strain.

The details of the method used for these experiments has been described previously in Tinsley et al. *Methods Enzymol.* 2002, 358; 188-207.

- 5 Results presented in Table 4 are expressed as the frequency of each ORF detection in the three different group A, B and D of *E.coli* strains.
- 10 Table 4 : Presence of Orfs encoding antigens in *E.coli* clinical isolate genomes

**Example 3** : Vaccines compositions intended for prevention of any form of infection by ExPEC.

- 5 The polypeptide coded by a sequence comprising SEQ ID N°28 is conjugated with a toxin and added to a physiologically inert vehicle.

10 This conjugated peptide is optionnally added to a childhood vaccine.

The composition is sterilized and can be injected parenterally, subcutaneously or intramuscularly.

- 15 Said composition can also be sprayed onto mucosa with the aid of a spray.

CLAIMS

1. The isolated polypeptides having SEQ ID N° 14, 15, 17, 21,  
22, 23, 28, 29, 30, 32, 36, 38, 39, 41-44, 46, 49, 50, 52 to  
5 55, 58, 60, 63, 133-138.

2- Isolated antigenic polypeptides according to claim 1  
obtainable by a process comprising the steps of :

- 10 a- selecting on the basis of sequence analysis those of the  
polypeptides which are either located in the outer membrane or  
secreted by the bacteria,  
b- identifying the genes coding for said polypeptides which  
are conserved in B2/D clinical isolates,  
c- purifying the polypeptides identified in step a, which are  
15 found in step b to be conserved in B2/D isolates,  
d- testing the polypeptides for immunogenicity using animals  
models.

3. Isolated polynucleotides, coding for a polypeptide  
20 according to claim 1 or 2, according to the universal genetic  
code.

4. Isolated polynucleotides according to claim 3, having  
sequences selected in the group comprising SEQ ID N° 80, 81,  
25 83, 87-89, 94-96, 98, 102, 104, 105, 107-110, 112, 115, 116,  
118, 119, 126, 127, 130, 132, 135, 146-151.

5. An expression vector comprising at least an isolated  
polynucleotide according to claim 3 or 4.

30

6. A host cell comprising an expression vector according  
to claim 5.

7. A process for isolating and identifying antigenic polypeptides, useful as vaccines comprising the steps of :

- a- selecting on the basis of sequence analysis those of the polypeptides which are either located in the outer membrane or  
5 secreted by the bacteria,
- b- identifying the genes coding for said polypeptides which are conserved in B2/D clinical isolates,
- c- purifying the polypeptides identified in step a, which are found in step b to be conserved in B2/D isolates,
- 10 d- testing the polypeptides for immunogenicity using animals models.

8. The process of claim 7, comprising the use of infected adult animals, eventually immunodepressed, and of infant  
15 animals as models for neonatal infections.

9. The use of at least one polypeptide or fragment of these polypeptides selected in the group comprising SEQ ID N°1 to SEQ ID N°66 (except SEQ ID N°8), or 133-145 as antigens and  
20 the homologous sequences.

10. A vaccine composition specific to *E. coli* extra-intestinal infections, comprising an effective amount of at least one antigenic polypeptide such as selected by the  
25 process of claim 7, or according to claim 9, alone or in combination, particularly at least one polypeptide having a sequence selected in the group comprising SEQ ID N°1 to SEQ ID N°66, or 133-145, except SEQ ID N°8 and the homologous sequences, with a carrier.

30

11. The vaccine composition of claim 10 for preventing urinary system infections, pyelonephritis, sepsis, bacteremia, neonatal meningitidis.

12. The vaccine composition of claim 10 or 11, adapted to specific indication in combination with components directed against other bacteria, such as *S.aureus* or group B *Streptococcus*. Or other bacteria implicated in systemic  
5 infections.

13. Antibodies or fragments thereof directed against a polypeptide such as used according to claim 9.

10 14. Monoclonal antibodies against epitopes of polypeptide and there use as pharmaceutical compound for treatment or prevention of severe infection due to Expec in neonates and patients at risk for such infections.

15 15. A method for detecting the presence or absence of undesirable extra-intestinal *E. coli*, and/or for the diagnosis of an extra-intestinal *E. coli* infection, comprising the use of at least one polypeptide such as defined in claim 1 or 2 or a polynucleotide according to claim 3 or 4, or an antibody to  
20 claim 13 or 14, said polypeptide(s) being optionally in combination with anyone of the polypeptides having SEQ ID N°1-66 to 133-145.

25 16. Pharmaceutical composition for alleviating and/or preventing and/or treating an undesirable growth of *E. coli* comprising an effective amount of at least one polypeptide according to claim 9, in combination with a pharmaceutically acceptable carrier.

# INTERNATIONAL SEARCH REPORT

International Application No  
PCT/EP 03/02925

A. CLASSIFICATION OF SUBJECT MATTER  
IPC 7 C12N15/31 C12N15/63 C07K14/245 C07K16/12 A61K39/108  
G01N33/53

According to International Patent Classification (IPC) or to both national classification and IPC

## B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)  
IPC 7 C12N C07K

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EPO-Internal, WPI Data, PAJ, BIOSIS, CHEM ABS Data, EMBASE

## C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	WO 01 66572 A (INST NAT SANTE RECH MED ;MASSIF XAVIER (FR); TINSLEY COLIN (FR); B) 13 September 2001 (2001-09-13) SEQ ID NOs:390 and 391 page 3, line 20 - page 4, line 17 page 29, line 23 - line 31 -----	1-6, 9-13,15, 16

☒ Further documents are listed in the continuation of box C.

☒ Patent family members are listed in annex.

### \* Special categories of cited documents :

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the International filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

"&" document member of the same patent family

Date of the actual completion of the international search

11 August 2003

Date of mailing of the international search report

# INTERNATIONAL SEARCH REPORT

International application No.  
PCT/EP 03/02925

## Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.:  
because they relate to subject matter not required to be searched by this Authority, namely:  
see FURTHER INFORMATION sheet PCT/ISA/210
2. ☒ Claims Nos.: 14  
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:  
see FURTHER INFORMATION sheet PCT/ISA/210
3. ☐ Claims Nos.:  
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

## Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

see additional sheet

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☒ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:  
1-6, 9-13, 15 and 16 partially

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.  
☐ No protest accompanied the payment of additional search fees.

## FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

## Continuation of Box I.1

As far as an "in vivo" method is concerned, claim 9 is directed to a method of treatment of the human/animal body and the search has been carried out and based on the alleged effects of the compound/composition.

As far as an "in vivo" method is concerned, claim 15 is directed to a diagnostic method practised on the human/animal body and the search has been carried out and based on the alleged effects of the compound/composition.

-----

## Continuation of Box I.2

Claims Nos.: 14

Claim 14 refers to "monoclonal antibodies against epitopes of polypeptide", but it does not say which polypeptide is meant. In consequence, the scope of said claim is ambiguous and vague and its subject-matter is not sufficiently disclosed and supported (Art. 83 and 84 EPC). Therefore, no search has been carried out on said claim.

The phrase "polypeptide such as used according to claim 9" comprised in Claim 13 lacks any sense. Nevertheless, the ISA has assumed that it is an error and that it refers to the polypeptides referred to in Claim 9 or, in other words, a polypeptide selected from the group comprising SEQ ID NOs:1-66 (except SEQ ID NO:8) and 133-145.

The applicant's attention is drawn to the fact that claims relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure. If the application proceeds into the regional phase before the EPO, the applicant is reminded that a search may be carried out during examination before the EPO (see EPO Guideline C-VI, 8.5), should the problems which led to the Article 17(2) declaration be overcome.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

Invention 1: Claims (1-6, 9-13, 15 and 16) - partially

Isolated antigenic polypeptide SEQ ID NO:14; the polynucleotide encoding it (SEQ ID NO:80); vector comprising said polynucleotide and host cell transformed with it; antibodies against said polypeptide; vaccines comprising the polypeptide; methods of diagnosis/treatment derived of the use of any of the molecules previously mentioned.

---

Inventions 2-32: Claims (1-6, 9-13, 15 and 16) - partially

Idem as invention 1, but restricted to each one of the polypeptides of SEQ ID NOs: 15, 17, 21-23, 28-30, 32, 36, 38, 39, 41-44, 46, 49, 50, 52-55, 58, 60, 63 and 133-138 and their corresponding genes (SEQ ID NOs:81, 83, 87-89, 94-96, 98, 102, 104, 105, 107-110, 112, 115, 116, 118, 119 and 126).

---

Invention 33: Claims (4-6) - partially

Isolated polynucleotide SEQ ID NO:127, vector comprising it and host cell transformed therewith.

---

Inventions 34-41: Claims (9-13, 15 and 16) - partially

Idem as invention 33, but restricted to each one of the polynucleotides SEQ ID NOs: 130, 132 and 146-151.

---

Invention 42: Claims (9-13, 15 and 16) - partially

Use of the polypeptide SEQ ID NO:1 as antigen; vaccines; antibodies against said polypeptide; methods of diagnosis/treatment derived of the use thereof.

---

Inventions 43-86: Claims (9-13, 15 and 16) - partially

Idem as invention 42, but restricted to each one of the polypeptides SEQ ID NOs: 2-7, 9-13, 16, 18-20, 24-27, 31, 33-35, 37, 40, 45, 47, 48, 51, 56, 57, 59, 61, 62, 64-66, 139-145.

---

Invention 87: Claims (7 and 8) - completely

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Process for isolating and identifying polypeptides useful as vaccines comprising the steps of: selecting on the basis of sequence analysis those of the polypeptides which are either located in the outer membrane or secreted by the bacteria; identifying the genes coding for said polypeptides which are conserved in B2/D clinical isolates; purifying the polypeptides identified in step 1, which are found in step 2 to be conserved in B2/D isolates; and testing the polypeptides for immunogenicity using animal models.
